Preparation of standard

Preparation of samples

Data at time = 0

Assay sample 2X per day

↓ 55 mg SnCl_2

↓ 0.5 ml 4% CaCl_2

↓ 0.5 ml $^{188}\text{ReO}_4$ (0.5 mCi)

↓ Heat at 100°C for 40 min

↓ Remove 10 μL , add to blank test tube, count with gamma counter

↓ Remove 100 μL from each sample, add to 3 blank test tubes (A,B,C) containing 0.4 ml Alginate

↓ Add 1 mL cold PBS to wash

↓ Decant PBS; add 1 mL fresh PBS

↓ Remove 100 μL from each sample, add to blank test tubes, count with gamma counter

↓ Add 100 μL of cold PBS to each sample

↓ Incubate at 37°C and collect data at desired time points

FIG. 7

100

A high-contrast, black and white photograph of a vertical measuring instrument, likely a depth gauge or a similar tool. The instrument has two vertical scales, one on the left and one on the right, both marked with numbers from 1 to 10. The scales are connected by a central vertical bar. The instrument is set against a dark, textured background.
